Preface Welcome to your Tufte-style book! This template allows you to create professional documents using the Tufte design principles.

What is a Quarto Book?

A Quarto book is a collection of documents (chapters) that are rendered together as a single unified output. With this Tufte template extension, you can:

- Write each chapter as a separate `.qmd` file
- Share configuration across all chapters using `_quarto.yml`
- Use consistent formatting (fonts, styling) across the entire book
- Generate a complete PDF with all chapters

How to Use This Template

1. **Edit `_quarto.yml`**: Update the book title, author, and chapter list
2. **Create chapters**: Add `.qmd` files in the `chapters/` directory
3. **Render the book**: Run `quarto render` to generate the complete PDF
4. **Customize formatting**: Adjust font settings, spacing, and styling in `_quarto.yml`

Features Preserved

This book project maintains all the features of the Tufte template: - Sidenotes for marginal comments - Wideblocks for full-width content - Margin figures - Beautiful typography with custom fonts - CJK language support

—

Chapter 1: Getting Started

This is the first chapter of your Tufte-style book. Each chapter is a separate Quarto document that will be combined into a single PDF when you render the project.

Writing Chapters

Just like the single-document templates, you can use all standard Quarto features:

- **Markdown formatting** for text
- **Code blocks** with syntax highlighting
- **Equations** using LaTeX
- **Citations** with bibliography references
- **Cross-references** between sections and figures
- **Sidenotes** for marginal comments

Using Sidenotes in Books

Sidenotes work the same way in books as in memo documents. Add them with the `.note` class:

This is some text with a sidenoteThis is a sidenote in a book chapter. right here. The sidenote appears in the margin just like in the memo template.

Figures and Tables

You can include figures and tables as usual. Here's an example code block (not executed):

```
# Example plot
plot(mtcars$wt, mtcars$mpg,
     main = "Weight vs Fuel Economy",
     xlab = "Weight (1000 lbs)",
     ylab = "Fuel Economy (mpg)")
```

Or using Python:

Section References

You can reference sections within your book using cross-references:

See `?@sec-next-section` for more information.

Next Steps

1. Edit the chapter list in `_quarto.yml` to include all your chapters
2. Create additional `.qmd` files in the `chapters/` directory
3. Use consistent formatting by adjusting the `format` section in `_quarto.yml`
4. Run `quarto render` from the project directory to generate the complete book

Tips for Writing Books

- Keep each chapter in a separate file for better organization
- Use consistent heading levels (start with `#` for chapter titles)
- Reference other chapters using cross-reference IDs
- Use the `freeze: auto` option to avoid re-executing unchanged chapters
- Customize fonts and styling in `_quarto.yml` to apply across the entire book

Chapter 2: Advanced Topics

This is the second chapter of your book, demonstrating more advanced features and capabilities.

Working with Data

You can include code blocks and data visualization examples:

```
# Example plot
plot(mtcars$wt, mtcars$mpg,
     main = "Weight vs Fuel Economy",
     xlab = "Weight (1000 lbs)",
     ylab = "Fuel Economy (mpg)")
```

Or using Python:

```
import matplotlib.pyplot as plt
import numpy as np

x = np.linspace(0, 10, 100)
y = np.sin(x)
plt.plot(x, y)
plt.title("Sine Wave")
plt.show()
```

Technical Content

This chapter can contain more technical material, complex equations, and detailed explanations.

For mathematical content, use LaTeX syntax:

$$E = mc^2 \tag{1}$$

Sidenotes for Additional Details

Complex topics are easier to understand when supplementary information is available in the margins. This is a sidenote with additional context that enriches the main narrative without interrupting the flow of reading.

Building on Previous Chapters

You can reference earlier chapters and sections using Quarto's cross-reference system. This helps readers navigate the content and understand relationships between different topics.

Ready for More Content

Add as many chapters as needed by:

1. Creating new `.qmd` files in the `chapters/` directory
2. Adding them to the `chapters:` list in `_quarto.yml`
3. Running `quarto render` to rebuild the entire book

Each chapter maintains the beautiful Tufte design while allowing you to focus on your content.

Conclusion

This concludes your Tufte-style book project.

Summary

Throughout this book, you’ve seen how the Tufte template works for both memo-style documents and multi-chapter book projects. The key advantages of using this template are:

- **Elegant Design:** Based on Edward Tufte’s principles of data visualization and clear typography
- **Margins:** Use sidenotes and margin figures to enhance your content without disrupting the main text flow
- **Typography:** Beautiful serif fonts with full CJK support for multilingual documents
- **Flexibility:** Works equally well for single memos or complete books

Project Organization

The book project structure allows you to:

1. Write each chapter independently in its own file
2. Share configuration across all chapters via `_quarto.yml`
3. Render the entire project with a single command
4. Maintain consistent formatting throughout your book

Customization

To customize your book further:

- **Fonts:** Edit the `format` section in `_quarto.yml` to change `mainfont`, `sansfont`, `codefont`, and CJK fonts
- **Chapters:** Add or remove files from the `chapters:` list in `_quarto.yml`
- **Styling:** Adjust spacing, margins, and typography in the Typst template files
- **Metadata:** Update book title, author, and date in the `book:` section of `_quarto.yml`

Rendering Your Book

To render the complete book:

```
quarto render
```

This will: 1. Process all chapters in order 2. Generate a unified PDF with continuous pagination 3. Include a table of contents (if enabled) 4. Apply consistent formatting throughout

Going Further

You can extend this template even more by:

- Adding a bibliography to `bibliography.bib`
- Using the serif variant by changing format configuration
- Adding appendices as additional chapters
- Customizing the page layout and margins in the Typst template

Happy writing!
